## Client Case Study

---

**LOCATION:** Dublin, Ireland

**WHAT WAS INVOLVED:**

Open plan offices often require private meeting spaces, which is where soundproofed phone booths and meeting rooms excel. These self-contained units provide rapid, plug-and-go solutions with full connectivity and amenities like air conditioning.

Our process involved receiving flatpack units from the North American manufacturer and delivering them to our warehouse. Our Specialist Logistics team then ensured delivery, assembly, and full functionality for Irish customers across the island.

We coordinated with the customer's facilities management team to arrange delivery, offloading, and positioning of the units onsite, considering access restrictions and logistical challenges. Once in place, our team assembled the units, handles all electrical and network connections, and ensures readiness for use.

The outcome demonstrates our ability to satisfy multiple stakeholders, including the manufacturer and our client, while ensuring customer satisfaction. We meticulously document the installation process to demonstrate compliance with standards.
