International Freight Forwarding with Committed to Sustainability

We've invested significantly in our fleet of vehicles and specialist equipment for lifting and handling. Our fleet of specialist vehicles and equipment includes protective air-ride suspension, large platform tail lifts, 29T robot skate, 5T - 20T jacks, skoots, multi-directional skates and electric pallet trucks to safely and correctly position your equipment.

Client Case Study

COMPANY: Global Healthcare Provider

LOCATION: Dublin, Ireland

WHAT WAS INVOLVED:

A global healthcare company with a diverse product portfolio sought a heavy lift specialist for the storage, delivery, offload, and installation of an IBC blender at their Dublin facility. Our Machinery Moving team prepared a risk assessment and method statement and provided a professional rigging and loading service for the client. The equipment, delivered on a Cronin Group vehicle, was offloaded using a 7T forklift, de-crated in the warehouse, and placed on multi-directional skates. Navigating through a tight opening posed a height

concern, but the team employed innovative techniques, lowering the machinery onto plates and roll bars to successfully manoeuvre it through. The crew then used skates to move the equipment to its final position, assembling the IBC blender in the production area. The 2-day installation process concluded with client testing, and the client expressed extreme satisfaction, praising the team's expertise with a comment: "You guys must have gone to Hogwarts for training because you are wizards at what you do."
